Protect Our Children From Toxic Pesticides

#PesticidesFreeWorld

Exclusive Indian Tour
September 4 to 11, 2015
*Bangalore * Trivandrum
*Kolkata * Chandigarh
* New Delhi

Dr. Bruce Lanphear, M.D., M.P.H., is a public health physician who conducts research on fetal and early childhood exposures to environmental neurotoxins at Simon Fraser University in British Columbia, Canada.

Little Things Matter

Children in India are being exposed to various environmental toxins, like pesticides, mercury and lead. Many of these chemicals have been banned in other countries and are linked to lowered intelligence, learning disabilities and behavioral disorders.

PAN India along with PANAP and PANNA are excited to highlight a speaking tour based on the research behind the video, “Little Things Matter: The Impact of Toxins on the Developing Brain” which is narrated and co-produced by Dr. Bruce Lanphear.

In expert public health physician, Dr Bruce Lanphear ‘s talks, you will learn about :

🚗 How children are exposed to pesticides and other environmental toxi

話し |

How low levels of neurotoxins can impact the developing brain of a child

Organized Jointly by PAN India and partners

Exclusive Indian Tour
4 to 11 September, 2015

Brain harming chemicals are so tiny that it can hardly be seen by the naked eye. Trace amounts of these chemicals have been found in umbilical cords and blood samples of children.

Why would little amounts of chemicals found in a child matter?

And how does it impact the intelligence of our young ones?

Join the exciting exclusive Indian tour with Dr. Bruce Lanphear, MD, MPH that explores why “Little Things Matter” and how environmental toxins like pesticides impact children’s intelligence.
